

AI WORKFORCE READINESS

AI Workforce Readiness & Adoption Playbook

A human-centered operating model for moving organizations from AI curiosity to responsible, measurable workforce adoption.

Andrea Davis-Baptiste

Enterprise Learning | AI Workforce Readiness | Leadership Enablement

STRATEGIC DEMONSTRATION PROJECT

This portfolio asset translates enterprise learning, technology adoption, change enablement, and responsible AI principles into a practical operating model. It is presented as a strategic prototype, not as a completed client implementation.

17+

years in learning and
technology enablement

600+

schools across the district
enterprise

1,000+

educators and stakeholders
enabled

35+

schools directly supported

THE READY FRAMEWORK

A workforce adoption system, not a tool-training campaign

AI adoption succeeds when business priorities, leadership behavior, role-based capability, workflow support, governance, and measurement operate as one connected system.

WHAT THIS PLAYBOOK PRODUCES

- AI readiness and risk diagnostic
- Executive sponsorship and manager enablement plan
- Role-based learning pathways and performance support
- Responsible-use guidance embedded in workflow
- Adoption scorecard linking activity to outcomes

START WITH THE WORK

Diagnose opportunity, friction, and safeguards before scaling

The diagnostic identifies where AI can improve performance, where adoption may stall, and what responsible-use boundaries are required.

DIAGNOSTIC DIMENSION	KEY QUESTION	EVIDENCE TO COLLECT
Business priorities	What outcomes matter most?	Cycle time, quality, service, cost, capacity, growth
Workflow readiness	Where is friction concentrated?	Repetitive tasks, handoffs, search, synthesis, documentation
Workforce capability	What do people know and trust?	AI literacy, prompting, judgment, verification, confidence
Leadership readiness	Will managers reinforce use?	Role modeling, coaching, workload decisions, escalation
Governance & risk	What boundaries are required?	Privacy, data handling, bias, accuracy, human review
Technology ecosystem	Can tools be used safely?	Access, permissions, integration, approved platforms, support

DECISION GATE

Do not launch enterprise-wide training until leaders can answer three questions:

- Which roles and workflows are changing?
- What constitutes responsible, high-quality use?
- How will leaders know adoption is improving performance, not only activity?

LEADERSHIP + CAPABILITY

Executives create permission. Managers create repetition.

Learning creates capability. All three must work together.

Leader Enablement

- Executive narrative tied to business priorities
- Manager conversation guide and coaching prompts
- Responsible-use expectations and escalation paths
- Leader dashboards for adoption and performance
- Recognition of safe experimentation

Learning Architecture

- Foundational AI literacy for all employees
- Role-specific use cases and workflow practice
- Scenario-based judgment and verification skills
- Performance support at the moment of need
- Communities of practice and peer demonstrations

ILLUSTRATIVE ROLE-BASED PATHWAY

AUDIENCE	ADOPTION ROLE	CAPABILITY FOCUS	EXPERIENCE
Executives	Sponsor	Strategic value, risk, investment, accountability	Briefing + decision lab
Managers	Reinforce	Coaching, workflow redesign, quality review, team norms	Workshop + coaching toolkit
Knowledge workers	Apply	Prompting, verification, approved use cases, judgment	Practice labs + job aids
L&D; / HR / Change	Scale	Capability design, communications, measurement, governance	Academy + implementation sprint
Technical / Risk	Safeguard	Tool controls, data handling, monitoring, escalation	Governance lab + scenarios

SUPPORTED BEHAVIOR CHANGE

Launch learning as one coordinated adoption system

Adoption improves when learning, communications, manager reinforcement, governance, and workflow support reach people together.

Communications

Why now, what is changing, approved use cases, success stories, and risk reminders.

Learning Experiences

Briefings, workshops, simulations, practice labs, microlearning, and office hours.

Performance Support

Prompt patterns, checklists, verification guides, workflow maps, and decision trees.

Manager Reinforcement

Team agreements, coaching prompts, observation guides, recognition, and escalation.

Change Network

Champions, communities of practice, peer demonstrations, and feedback loops.

Governance Integration

Human review standards, data boundaries, approved tools, and incident reporting.

MINIMUM VIABLE MANAGER TOOLKIT

- 15-minute team discussion guide
- Role-specific use-case menu
- Quality and verification checklist
- Coaching questions for AI-assisted work
- Responsible-use escalation reference
- Monthly team adoption pulse

MEASURE WHAT MATTERS

Connect learning activity to proficiency, behavior, and value

Completion data is useful, but it is not proof of adoption. The scorecard follows the path from reach to business impact

MEASURE	QUESTION	ILLUSTRATIVE INDICATORS	CADENCE
Reach	Who participated?	Enrollment, attendance, completion, role coverage	Weekly at launch
Confidence	Do people feel prepared?	Self-efficacy, clarity, trust, manager support	Baseline + 30/60/90
Proficiency	Can they perform safely?	Scenario scores, demonstrations, quality checks	After practice
Adoption	Are approved workflows changing?	Active use, repeat use, use-case penetration	Monthly
Quality & risk	Is use responsible and accurate?	Human review, error rate, escalation, adherence	Continuous
Business impact	Is performance improving?	Cycle time, capacity, service, quality, cost	Quarterly

EXECUTIVE DASHBOARD QUESTIONS

- Which roles are moving from awareness to proficiency?
 - Where is manager reinforcement strongest or weakest?
 - Which use cases improve performance without increasing risk?
- What barrier should leaders remove next?
 - What learning or governance intervention is required?

Measurement principle: Use leading indicators to improve the rollout and lagging indicators to prove value. Pair quantitative data with employee, manager, and customer evidence to understand not only whether adoption occurred, but why.

A PRACTICAL 90-DAY SEQUENCE

Align and diagnose before scaling

The sequence prioritizes alignment and evidence, then uses rapid learning cycles to improve adoption.

GOVERNANCE CADENCE AFTER LAUNCH

WEEKLY	MONTHLY	QUARTERLY	BIANNUAL
Pilot issues + learner feedback	Adoption + manager reinforcement	Value, risk + roadmap	Capability architecture refresh

FROM FRAMEWORK TO ACTION

Reusable assets that make adoption practical

The READY Framework is designed to generate concrete tools leaders, managers, employees, and

AI Readiness Diagnostic

Assesses workflow opportunity, confidence, capability, governance, leadership readiness, and barriers.

Learning Pathway Blueprint

Maps awareness, fluency, proficiency, practice, reinforcement, and evidence of performance.

Responsible-Use Job Aid

Translates policy into practical decisions for data handling, verification, human review, and risk.

Role & Use-Case Matrix

Connects job families and priority workflows to approved AI applications and required skills.

Manager Enablement Kit

Includes team discussion guides, coaching prompts, review checklists, and escalation references.

Adoption & Value Scorecard

Tracks reach, confidence, proficiency, use, quality, risk, and business outcomes.

SELECTED ENTERPRISE IMPACT

- District enterprise serving 600+ schools
- 35+ schools directly supported
- 1,000+ educators and stakeholders enabled
- 40% improvement in technology adoption
- 25% improvement in knowledge retention
- 25% increase in LMS engagement
