Future Ready AI Learning Cycle

Launch

Introduce a question, scenario, challenge, or real-world problem.

Teacher actions:

Student actions:

Evidence of learning:

Explore

Investigate examples, tools, ideas, evidence, and possible approaches.

Teacher actions:

Student actions:

Evidence of learning:

Explain

Build understanding through discussion, modeling, and direct instruction.

Teacher actions:

Student actions:

Evidence of learning:

Create

Apply learning through a product, solution, performance task, or prototype.

Teacher actions:

Student actions:

Evidence of learning:

Reflect

Evaluate choices, outcomes, responsible use, and the role of human judgment.

Teacher actions:

Student actions:

Evidence of learning:

Extend

Connect the learning to another subject, career, community, or emerging challenge.

Teacher actions:

Student actions:

Evidence of learning:

Assessment and Reflection

Formative assessment method:

Student product or performance:

Responsible-use evidence:

Reflection question:

Extension or career connection:

Differentiation and accessibility supports:

Quality Review Checklist

- ☐ The lesson is age-appropriate and connected to a clear learning outcome.
- ☐ AI use supports rather than replaces student thinking and creativity.
- ☐ Students evaluate accuracy, limitations, or possible bias when relevant.
- ☐ Privacy and approved-tool expectations are explicit.
- ☐ Human judgment and responsible decision-making are visible.
- ☐ Assessment measures understanding and application, not only tool use.
- ☐ The lesson includes accessibility and differentiation considerations.
